

Bruce K. Driver

Analysis Tools with Examples

August 6, 2004 *File:anal.tex*

This is the table of contents for the whole file. I am just giving you this so you know that I still have a lot of choices to make as to what should be included in the book.

Springer

Berlin Heidelberg New York

Hong Kong London

Milan Paris Tokyo

Contents

Part I Background Material

1	Introduction / User Guide	3
1.1	Topology beginnings	3
1.2	A Better Integral and an Introduction to Measure Theory	3
2	Set Operations	7
2.1	Exercises	10
3	A Brief Review of Real and Complex Numbers	11
3.1	The Real Numbers	12
3.1.1	The Decimal Representation of a Real Number	16
3.2	The Complex Numbers	19
3.3	Exercises	20
4	Limits and Sums	21
4.1	Limsups, Liminfs and Extended Limits	21
4.2	Sums of positive functions	24
4.3	Sums of complex functions.....	28
4.4	Iterated sums and the Fubini and Tonelli Theorems.....	32
4.5	Exercises	34
4.5.1	Limit Problems	34
4.5.2	Dominated Convergence Theorem Problems	35
5	ℓ^p – spaces, Minkowski and Holder Inequalities	39
5.1	Exercises	44

Part II Metric, Banach, and Hilbert Space Basics

6	Metric Spaces	49
6.1	Continuity	51
6.2	Completeness in Metric Spaces	53
6.3	Supplementary Remarks	55
6.3.1	Word of Caution	55
6.3.2	Riemannian Metrics	56
6.4	Exercises	57
7	Banach Spaces	59
7.1	Examples	59
7.2	Bounded Linear Operators Basics	62
7.3	General Sums in Banach Spaces	69
7.4	Inverting Elements in $L(X)$	71
7.5	Exercises	74
8	Hilbert Space Basics	77
8.1	Hilbert Space Basis	85
8.2	Some Spectral Theory	91
8.3	Compact Operators on a Hilbert Space	97
8.3.1	The Spectral Theorem for Self Adjoint Compact Operators	99
8.4	Supplement 1: Converse of the Parallelogram Law	103
8.5	Supplement 2. Non-complete inner product spaces	105
8.6	Exercises	106
9	Hölder Spaces as Banach Spaces	109
9.1	Exercises	113

Part III Calculus and Ordinary Differential Equations in Banach Spaces

10	The Riemann Integral	117
10.1	The Fundamental Theorem of Calculus	121
10.2	Integral Operators as Examples of Bounded Operators	125
10.3	Linear Ordinary Differential Equations	127
10.4	Classical Weierstrass Approximation Theorem	132
10.5	Iterated Integrals	138
10.6	Exercises	139
11	Ordinary Differential Equations in a Banach Space	145
11.1	Examples	145
11.2	Uniqueness Theorem and Continuous Dependence on Initial Data	147
11.3	Local Existence (Non-Linear ODE)	149
11.4	Global Properties	152

11.5 Semi-Group Properties of time independent flows 158
 11.6 Exercises 160

12 Banach Space Calculus 165
 12.1 The Differential 165
 12.2 Product and Chain Rules 167
 12.3 Partial Derivatives 171
 12.4 Higher Order Derivatives 173
 12.5 Inverse and Implicit Function Theorems 177
 12.6 Smooth Dependence of ODE's on Initial Conditions* 184
 12.7 Existence of Periodic Solutions 187
 12.8 Contraction Mapping Principle 189
 12.9 Exercises 191
 12.9.1 Alternate construction of g . To be made into an exercise. 193

Part IV Topological Spaces

13 Topological Space Basics 197
 13.1 Constructing Topologies and Checking Continuity 198
 13.2 Product Spaces I 204
 13.3 Closure operations 207
 13.4 Countability Axioms 209
 13.5 Connectedness 211
 13.6 Exercises 215
 13.6.1 General Topological Space Problems 215
 13.6.2 Connectedness Problems 216
 13.6.3 Metric Spaces as Topological Spaces 217

14 Compactness 219
 14.1 Metric Space Compactness Criteria 220
 14.2 Compact Operators 227
 14.3 Local and σ - Compactness 228
 14.4 Function Space Compactness Criteria 230
 14.5 Tychonoff's Theorem 234
 14.6 Banach - Alaoglu's Theorem 237
 14.6.1 Weak and Strong Topologies 237
 14.7 Weak Convergence in Hilbert Spaces 239
 14.8 Exercises 242
 14.8.1 Ascoli-Arzela Theorem Problems 242
 14.8.2 Tychonoff's Theorem Problem 244

15	Locally Compact Hausdorff Spaces	245
15.1	Locally compact form of Urysohn's Metrization Theorem	250
15.2	Partitions of Unity	253
15.3	$C_0(X)$ and the Alexanderov Compactification	257
15.4	Stone-Weierstrass Theorem	260
15.5	*More on Separation Axioms: Normal Spaces	265
15.6	Exercises	268
16	Baire Category Theorem	271
16.1	Metric Space Baire Category Theorem	271
16.2	Locally Compact Hausdorff Space Baire Category Theorem ...	272
16.3	Exercises	278

Part V Lebesgue Integration Theory

17	Introduction: What are measures and why "measurable" sets	281
17.1	The problem with Lebesgue "measure"	282
18	Measurability	287
18.1	Algebras and σ - Algebras	287
18.2	Measurable Functions	292
18.2.1	More general pointwise limits	299
18.3	σ - Function Algebras	300
18.4	Product σ - Algebras	307
18.4.1	Factoring of Measurable Maps	310
18.5	Exercises	311
19	Measures and Integration	313
19.1	Example of Measures	316
19.1.1	ADD: Examples of Measures	318
19.2	Integrals of Simple functions	318
19.3	Integrals of positive functions	320
19.4	Integrals of Complex Valued Functions	328
19.5	Measurability on Complete Measure Spaces	337
19.6	Comparison of the Lebesgue and the Riemann Integral	338
19.7	Determining Classes of Measures	341
19.8	Exercises	344
20	Multiple Integrals	347
20.1	Fubini-Tonelli's Theorem and Product Measure	348
20.2	Lebesgue Measure on \mathbb{R}^d and the Change of Variables Theorem	356
20.3	The Polar Decomposition of Lebesgue Measure	367
20.4	More proofs of the classical Weierstrass approximation Theorem 10.35	371

20.5 More Spherical Coordinates 373

20.6 Sard's Theorem 378

20.7 Exercises 382

21 L^p -spaces 385

21.1 Jensen's Inequality 389

21.2 Modes of Convergence 393

21.3 Completeness of L^p – spaces 397

21.3.1 Summary: 401

21.4 Converse of Hölder's Inequality 402

21.5 Uniform Integrability 407

21.6 Exercises 414

22 Approximation Theorems and Convolutions 417

22.1 Density Theorems 417

22.2 Convolution and Young's Inequalities 424

22.2.1 Smooth Partitions of Unity 434

22.3 Exercises 435

Part VI Further Hilbert and Banach Space Techniques

23 L^2 - Hilbert Spaces Techniques and Fourier Series 441

23.1 L^2 -Orthonormal Basis 441

23.2 Hilbert Schmidt Operators 443

23.3 Fourier Series Considerations 448

23.3.1 Dirichlet, Fejér and Kernels 449

23.3.2 The Dirichlet Problems on D and the Poisson Kernel . . 454

23.4 Weak L^2 -Derivatives 457

23.5 *Conditional Expectation 459

23.6 Exercises 462

23.7 Fourier Series Exercises 465

23.8 Conditional Expectation Exercises 468

24 Complex Measures, Radon-Nikodym Theorem and the Dual of L^p 471

24.1 The Radon-Nikodym Theorem 472

24.2 The Structure of Signed Measures 478

24.2.1 Hahn Decomposition Theorem 479

24.2.2 Jordan Decomposition 480

24.3 Complex Measures 484

24.4 Absolute Continuity on an Algebra 488

24.5 Exercises 491

25	Three Fundamental Principles of Banach Spaces	493
25.1	The Hahn-Banach Theorem	493
25.1.1	Hahn – Banach Theorem Problems	501
25.1.2	*Quotient spaces, adjoints, and more reflexivity	502
25.2	The Open Mapping Theorem	507
25.3	Uniform Boundedness Principle	511
25.3.1	Applications to Fourier Series	514
25.4	Exercises	516
25.4.1	More Examples of Banach Spaces	516
25.4.2	Hahn-Banach Theorem Problems	516
25.4.3	Open Mapping and Closed Operator Problems	517
25.4.4	Weak Topology and Convergence Problems	518
26	Weak and Strong Derivatives	521
26.1	Basic Definitions and Properties	521
26.2	Exercises	536
27	Bochner Integral	539
27.1	Bochner Integrals (NEEDS WORK)	543
27.1.1	Bochner Integral Problems From Folland	543
27.2	Hilbert Valued Integral	546

Part VII Construction and Differentiation of Measures

28	Examples of Measures	551
28.1	Extending Premeasures to Measures	551
28.1.1	Regularity and Density Results	553
28.2	The Riesz-Markov Theorem	555
28.2.1	Regularity Results For Radon Measures	558
28.2.2	The dual of $C_0(X)$	564
28.3	Classifying Radon Measures on \mathbb{R}	567
28.3.1	Classifying Radon Measures on \mathbb{R} using Theorem 28.2	568
28.3.2	Classifying Radon Measures on \mathbb{R} using the Riesz-Markov Theorem 28.16	571
28.3.3	The Lebesgue-Stieljtes Integral	573
28.4	Kolmogorov’s Existence of Measure on Products Spaces	575
29	Probability Measures on Lusin Spaces	579
29.1	Weak Convergence Results	579
29.2	Haar Measures	583
29.3	Hausdorff Measure	583
29.4	Exercises	583
29.4.1	The Laws of Large Number Exercises	585

30 Lebesgue Differentiation and the Fundamental Theorem of Calculus 587

30.1 A Covering Lemma and Averaging Operators 588

30.2 Maximal Functions 589

30.3 Lebesgue Set..... 591

30.4 The Fundamental Theorem of Calculus..... 594

 30.4.1 Increasing Functions 595

 30.4.2 Functions of Bounded Variation 598

 30.4.3 Alternative method to Proving Theorem 30.29 609

30.5 The connection of Weak and pointwise derivatives 611

30.6 Exercises 616

31 Constructing Measures Via Carathéodory 617

31.1 Construction of Premeasures 618

 31.1.1 Extending Premeasures to \mathcal{A}_σ 619

31.2 Outer Measures 621

31.3 *The σ – Finite Extension Theorem 622

31.4 General Extension and Construction Theorem..... 626

 31.4.1 Extensions of General Premeasures 628

31.5 Proof of the Riesz-Markov Theorem 28.16 631

31.6 More Motivation of Carathéodory’s Construction Theorem

 31.17 635

31.7 Supplement: Generalizations of Theorem 19.8 or 28.40 to \mathbb{R}^n .. 636

31.8 Old Stuff: Construction of measures on a simple product space.639

32 The Daniell – Stone Construction of Integration and Measures 643

 32.0.1 Examples of Daniell Integrals 645

32.1 Extending a Daniell Integral 646

32.2 The Structure of $L^1(I)$ 656

32.3 Relationship to Measure Theory 657

32.4 Extensions of premeasures to measures 663

 32.4.1 A Useful Version: BRUCE: delete this if incorporated above. 665

32.5 Riesz Representation Theorem 667

32.6 The General Riesz Representation by Daniell Integrals (Move Later?)..... 672

32.7 Regularity Results 674

32.8 Metric space regularity results resisted 680

32.9 General Product Measures..... 681

32.10Daniel Integral approach to dual spaces 684

33 Class Arguments	687
33.1 Monotone Class and $\pi - \lambda$ Theorems	687
33.1.1 Some other proofs of previously proved theorems	690
33.2 Regularity of Measures	691
33.2.1 Another proof of Theorem 28.22	695
33.2.2 Second Proof of Theorem 22.13	696

Part VIII The Fourier Transform and Generalized Functions

34 Fourier Transform	699
34.1 Fourier Transform	700
34.2 Schwartz Test Functions	703
34.3 Fourier Inversion Formula	705
34.4 Summary of Basic Properties of \mathcal{F} and \mathcal{F}^{-1}	709
34.5 Fourier Transforms of Measures and Bochner's Theorem	709
34.6 Supplement: Heisenberg Uncertainty Principle	713
34.6.1 Exercises	715
34.6.2 More Proofs of the Fourier Inversion Theorem	716
35 Constant Coefficient partial differential equations	719
35.1 Elliptic examples	720
35.2 Poisson Semi-Group	722
35.3 Heat Equation on \mathbb{R}^n	723
35.4 Wave Equation on \mathbb{R}^n	728
35.5 Elliptic Regularity	734
35.6 Exercises	739
36 Elementary Generalized Functions / Distribution Theory ..	741
36.1 Distributions on $U \subset_o \mathbb{R}^n$	741
36.2 Examples of distributions and related computations	742
36.3 Other classes of test functions	750
36.4 Compactly supported distributions	755
36.5 Tempered Distributions and the Fourier Transform	758
36.6 Wave Equation	765
36.7 Appendix: Topology on $C_c^\infty(U)$	770
37 Convolutions involving distributions	775
37.1 Tensor Product of Distributions	775
37.2 Elliptic Regularity	785
37.3 Appendix: Old Proof of Theorem 37.4	789

Part IX Functional Analysis

38 Polar Decomposition of an Operator	795
--	-----

39 Trace Class & Fredholm Operators 801

39.1 Trace Class Operators..... 801

39.2 Fredholm Operators 804

39.3 Tensor Product Spaces 809

40 Spectral Theorem for Self-Adjoint Operators 815

40.1 $*$ -Algebras (over complexes) 822

40.1.1 Exercises 826

40.2 The Spectral Theorem 828

40.2.1 Problems on the Spectral Theorem (Multiplication Operator Form) 835

40.3 Spectral Theory in Hilbert Space 838

40.3.1 Multiplication operators..... 841

40.3.2 Spectrum..... 843

40.3.3 Spectral Theorem and the Functional Calculus 845

40.3.4 Fourier Transform Proof of Theorem 40.83..... 846

40.3.5 Proof of Theorem 40.83 850

40.3.6 Extensions to commuting self-adjoint operators 852

40.3.7 Exercises 860

40.4 Unbounded Self-Adjoint Operators 861

40.4.1 Affiliated operators 870

40.5 Bounded Self - Adjoint Operators 872

40.6 The Structure of Abelian Banach Algebras 877

41 Topological Vector Spaces 885

41.1 Basic Facts 885

41.2 The Structure of Finite Dimensional Topological Vector Spaces 887

41.3 Metrizable Topological Vector Spaces 889

Part X Complex Variable Theory

42 Complex Differentiable Functions..... 897

42.1 Basic Facts About Complex Numbers 897

42.2 The complex derivative..... 898

42.3 Contour integrals 904

42.4 Weak characterizations of $H(\Omega)$ 911

42.5 Summary of Results 916

42.6 Exercises 917

42.7 Problems from Rudin 919

43 More Complex Variables: The Index 921

43.1 Unique Lifting Theorem 922

43.2 Path Lifting Property 923

43.2.1 **Alternate Method**..... 924

43.2.2	General Form of Cauchy Integral Formula	929
44	Residue Theorem	933
44.1	Residue Theorem	933
44.2	Open Mapping Theorem	936
44.3	Applications of Residue Theorem	937
44.3.1	Applications; fundamental theory of Algebra.	938
44.4	Isolated Singularity Theory	939
45	Conformal Equivalence	943
46	Find All Conformal Homeomorphisms of $V \rightarrow U$	947
46.1	“Sketch of Proof of Riemann Mapping” Theorem	948
46.1.1	Normal Families	948
47	Littlewood Payley Theory	957
47.0.2	Applications	960

Part XI An Introduction to Differentiable Manifolds

48	Inverse Function Theorem and Embedded Submanifolds	967
48.1	Embedded Submanifolds	967
48.2	Exercises	968
48.3	Construction of Embedded Submanifolds	969
49	The Flow of a Vector Fields on Manifolds	971
50	Surfaces, Surface Integrals and Integration by Parts	975
50.1	Surface Integrals	977
50.2	More spherical coordinates	987
50.3	n – dimensional manifolds with boundaries	991
50.4	Divergence Theorem	994
50.5	The proof of the Divergence Theorem	997
50.5.1	The Proof of the Divergence Theorem 50.23	1000
50.5.2	Extensions of the Divergence Theorem to Lipschitz domains	1001
50.6	Application to Holomorphic functions	1003
50.7	Dirichlet Problems on D	1006
50.7.1	Appendix: More Proofs of Proposition 50.32	1009
50.8	Exercises	1011
51	Co-Area Formula in Riemannian Geometry	1015
51.0.1	Formal Proof of Theorem 51.3	1021
51.1	Special case of the Co-area formula when $X = \mathbb{R}$	1024
51.2	Differential Geometric Version of Co-Area Formula	1026

52 Application of the Co-Area Formulas1029
 52.1 Existence of Densities for Push Forwards of Measures 1029
 52.2 Sobolev Inequalities and Isoperimetric Inequalities 1032

Part XII L^2 – Sobolev spaces and Pseudo Differential Operators

53 L^2 – Sobolev spaces on T^n 1037

54 L^2 – Sobolev spaces on \mathbb{R}^n 1039
 54.1 Sobolev Spaces 1039
 54.2 Examples 1049
 54.3 **Summary of operations on $H_{-\infty}$** 1052
 54.4 Application to Differential Equations 1054
 54.4.1 Dirichlet problem 1054

55 Pseudo-Differential Operators on Euclidean space 1057
 55.0.2 On the decay of $\partial^\alpha \langle x \rangle^s$ and $\partial_x^\alpha |x|^{2m}$ 1057
 55.1 Symbols and their operators 1059
 55.1.1 A remark on the Fourier Inversion Formula 1059
 55.2 A more general symbol class 1061
 55.2.1 Heuristics 1062
 55.2.2 The proofs 1064
 55.3 Schwartz Kernel Approach 1071
 55.4 Pseudo Differential Operators 1077

56 Elliptic Pseudo Differential Operators on \mathbb{R}^d 1091

57 Pseudo differential operators on Compact Manifolds 1097

58 Sobolev Spaces on M 1101
 58.1 Alternate Definition of H_k for k -integer 1106
 58.2 Scaled Spaces 1108
 58.3 General Properties of “Scaled space” 1109

Part XIII P.D.E Examples

59 Some Examples of PDE’s 1115
 59.1 Some More Geometric Examples 1120

Part XIV First Order Scalar Equations

60	First Order Quasi-Linear Scalar P.D.E	1123
60.1	Linear Evolution Equations	1123
60.1.1	A 1-dimensional wave equation with non-constant coefficients	1130
60.2	General Linear First Order P.D.E	1132
60.3	Quasi-Linear Equations	1138
60.4	Distribution Solutions for Conservation Laws	1144
60.5	Exercises	1149
61	Fully nonlinear first order P.D.E	1155
61.1	An Introduction to Hamilton Jacobi Equations	1160
61.1.1	Solving the Hamilton Jacobi Equation (61.17) by characteristics	1160
61.1.2	The connection with the Euler Lagrange Equations ...	1161
61.2	Geometric meaning of the Legendre Transform	1167
62	Cauchy – Kovalevskaya Theorem	1169
62.1	PDE Cauchy Kovalevskaya Theorem	1174
62.2	Proof of Theorem 62.7	1179
62.3	Examples	1180

Part XV Elliptic ODE

63	A very short introduction to generalized functions	1185
64	Elliptic Ordinary Differential Operators	1189
64.1	Symmetric Elliptic ODE	1190
64.2	General Regular 2nd order elliptic ODE	1193
64.3	Elementary Sobolev Inequalities	1203
64.4	Associated Heat and Wave Equations	1207
64.5	Extensions to Other Boundary Conditions	1209
64.5.1	Dirichlet Forms Associated to $(L, D(L))$	1211

Part XVI Constant Coefficient Equations

65	Convolutions, Test Functions and Partitions of Unity	1219
65.1	Convolution and Young's Inequalities	1219
65.2	Smooth Partitions of Unity	1230
66	Poisson and Laplace's Equation	1233
66.1	Harmonic and Subharmonic Functions	1240
66.2	Green's Functions	1250
66.3	Explicit Green's Functions and Poisson Kernels	1254

66.4 Green's function for Ball 1257
 66.5 Perron's Method for solving the Dirichlet Problem 1262
 66.6 Solving the Dirichlet Problem by Integral Equations 1267

67 Introduction to the Spectral Theorem 1269
 67.1 Du Hammel's principle again 1276

68 Heat Equation 1285
 68.1 Extensions of Theorem 68.1 1288
 68.2 Representation Theorem and Regularity 1291
 68.3 Weak Max Principles 1293
 68.4 Non-Uniqueness of solutions to the Heat Equation 1299
 68.5 The Heat Equation on the Circle and \mathbb{R} 1301

69 Abstract Wave Equation 1303
 69.1 Corresponding first order O.D.E. 1304
 69.2 Du Hamel's Principle 1306

70 Wave Equation on \mathbb{R}^n 1309
 70.1 $n = 1$ Case 1310
 70.1.1 Factorization method for $n = 1$ 1312
 70.2 Solution for $n = 3$ 1313
 70.2.1 Alternate Proof of Theorem 70.4 1314
 70.3 Du Hamel's Principle 1315
 70.4 Spherical Means 1316
 70.5 Energy methods 1318
 70.6 Wave Equation in Higher Dimensions 1320
 70.6.1 Solution derived from the heat kernel 1320
 70.6.2 Solution derived from the Poisson kernel 1322
 70.7 Explain Method of descent $n = 2$ 1325

Part XVII Sobolev Theory

71 Sobolev Spaces 1329
 71.1 Mollifications 1331
 71.1.1 Proof of Theorem 71.10 1335
 71.2 Difference quotients 1337
 71.3 Sobolev Spaces on Compact Manifolds 1339
 71.4 Trace Theorems 1344
 71.5 Extension Theorems 1349
 71.6 Exercises 1353

72 Sobolev Inequalities	1355
72.1 Morrey's Inequality	1355
72.2 Rademacher's Theorem	1361
72.3 Gagliardo-Nirenberg-Sobolev Inequality	1362
72.4 Sobolev Embedding Theorems Summary	1367
72.5 Compactness Theorems	1370
72.6 Fourier Transform Method	1374
72.7 Other theorems along these lines	1375
72.8 Exercises	1377

Part XVIII Variable Coefficient Equations

73 2nd order differential operators	1381
73.1 Outline of future results	1385
74 Dirichlet Forms	1387
74.1 Basics	1387
75 Unbounded operators and quadratic forms	1391
75.1 Unbounded operator basics	1391
75.2 Lax-Milgram Methods	1393
75.3 Close, symmetric, semi-bounded quadratic forms and self-adjoint operators	1396
75.4 Construction of positive self-adjoint operators	1401
75.5 Applications to partial differential equations	1402
76 Weak Solutions for Elliptic Operators	1405
77 Elliptic Regularity	1409
77.1 Interior Regularity	1409
77.2 Boundary Regularity Theorem	1412
78 L^2 – operators associated to \mathcal{E}	1427
78.1 Compact perturbations of the identity and the Fredholm Alternative	1428
78.2 Solvability of $Lu = f$ and properties of the solution	1430
78.3 Interior Regularity Revisited	1434
78.4 Classical Dirichlet Problem	1435
78.5 Some Non-Compact Considerations	1436
78.5.1 Heat Equation	1438
78.5.2 Wave Equation	1438
79 Spectral Considerations	1439
79.1 Growth of Eigenvalues I	1440

Part XIX Heat Kernel Properties

80 Construction of Heat Kernels by Spectral Methods 1447
 80.1 Positivity of Dirichlet Heat Kernel by Beurling Deny Methods . 1451

81 Nash Type Inequalities and Their Consequences 1453

82 T. Coulhon Lecture Notes 1461
 82.1 Weighted Riemannian Manifolds 1461
 82.2 Graph Setting 1463
 82.3 Basic Inequalities 1465
 82.4 A Scale of Inequalities 1467
 82.5 Semi-Group Theory 1471

Part XX Heat Kernels on Vector Bundles

83 Heat Equation on \mathbb{R}^n 1477

84 An Abstract Version of E. Levi’s Argument 1479

85 Statement of the Main Results 1483
 85.1 The General Setup: the Heat Eq. for a Vector Bundle 1483
 85.2 The Jacobian (J – function) 1484
 85.3 The Approximate Heat Kernels 1485
 85.4 The Heat Kernel and its Asymptotic Expansion 1486

86 Proof of Theorems 85.7 and 85.10 1489
 86.1 Proof of Theorem 85.7 1489
 86.2 Proof of Theorem 85.10 1491

87 Properties of ρ 1493
 87.0.1 Proof of Proposition 87.1 1494
 87.0.2 On the Operator Associated to the Kernel ρ 1495

88 Proof of Theorem 85.4 and Corollary 85.6 1499
 88.1 Proof of Corollary 85.6 1499
 88.2 Proof of Theorem 85.4 1500

89 Appendix: Gauss’ Lemma & Polar Coordinates 1505
 89.1 The Laplacian of Radial Functions 1506

90 The Dirac Equation a la Roe’s Book 1509
 90.1 Kernel Construction 1512
 90.2 Asymptotics by Sobolev Theory 1515

91 Appendix: VanVleck Determinant Properties 1517

91.1 Proof of Lemma 85.3..... 1517

91.2 Another Proof of Remark 85.2: The Symmetry of $J(x, y)$ 1519

91.3 Normal Coordinates 1520

92 Miscellaneous 1525

92.1 Jazzed up version of Proposition 92.1 1525

92.1.1 Proof of Eq. (92.3) 1527

92.1.2 Old proof of Proposition 84.1 1527

92.1.3 Old Stuff related to Theorem 85.7 1531

93 Remarks on Covariant Derivatives on Vector Bundles 1533

94 Spin Bundle Stuff..... 1537

95 The Case where $M = \mathbb{R}^n$ 1539

95.1 Formula involving p 1539

95.2 Asymptotics of a perturbed Heat Eq. on \mathbb{R}^n 1540

Part XXI PDE Extras

96 Higher Order Elliptic Equations 1547

97 Abstract Evolution Equations 1551

97.1 Basic Definitions and Examples 1551

97.2 General Theory of Contraction Semigroups 1555

98 Solutions to Exercises 1565

98.1 Section 60 Solutions 1565

98.1.1 Old Exercises Solutions 1566

98.2 Section 50 Solutions 1569

98.3 Section 66 Solutions 1571

Part XXII Old PDE Stuff

99 Old Section Stuff 1575

99.1 Section 60 1575

99.2 Section 61 1577

99.3 Section 62 1579

99.4 Old Section 64 Stuff 1580

99.5 Old Section 66 Stuff 1581

99.6 Old Section 70 Now to the $n = 3$ Case: formally compute: 1583

99.7 Probably delete the following stuff 1587
