1. For each of the numbers $m$ below, either write $m$ as a sum of two squares or explain why it cannot be done:

(a) 3185  (b) 1885  (c) 1189

Also determine which of the numbers above can be the length of the hypotenuse of a right triangle whose sides all have integer length.

2. Write 975 as a product of Gaussian primes.
