Question 1 Let $f(z) = e^z$ and $g(z) = z^{\frac{1}{4}}$.

- A. $f(z)$ is single-valued, but $g(z)$ is multiple-valued.
- B. $f\left(\frac{1}{4}\right) = g(e)$ since they are both equal to $e^{\frac{1}{4}}$.
- C. $g(e) = \left\{ e^{\frac{1}{4} + i\frac{\pi}{2}k}, k = 0, 1, 2, 3 \right\}$.
- D. **B** and **C**
- *E. **A** and **C**

Question 2 A function $f(x, y) = (u(x, y), v(x, y))$ is complex differentiable at $z_0 = (x_0, y_0)$ if and only if

A. $\frac{\partial u}{\partial x} = \frac{\partial v}{\partial y}$ and $\frac{\partial u}{\partial y} = -\frac{\partial v}{\partial x}$ at (x_0, y_0) .

B. $\frac{\partial}{\partial x}(u + iv) = \frac{1}{i} \frac{\partial}{\partial y}(u + iv)$ at (x_0, y_0) .

C. $\lim_{\Delta z \rightarrow 0} \frac{f(z_0 + \Delta z) - f(z_0)}{\Delta z}$ converges.

D. **A** and **C**.

*E. **A**, **B**, and **C**.

Note: **B** follows from **A**.

Question 3 The power function z^α is single-valued

- A. for every real number α .
- B. for every rational number α .
- *C. for every integer α .
- D. All of the above; after all, every rational number is a real number and every integer is a rational number.
- E. None of the above; z^α is always multiple-valued.
