The second midterm exam for Math 11 will be held on **Friday, May 26, 3:00-3:50pm in Pepper Canyon Lecture Hall 109**. Please read through the following very carefully.

1. You will be assigned a random seat number. Please check TritonEd under Grades>Midterm 2 Seat to find out your seat number. Seat numbers will be available by Thursday night.

2. Please remember to bring a calculator. However, use of cellphones, tablets, laptops, and such is prohibited.

3. The second midterm will be on topics we covered after the first midterm, up to (and including) confidence interval for mean. This includes, Chapters 11 and 15-21 of the textbook, except sections 20.4 and 21.4, the handout on continuous random variables, and lecture notes 12-21. Although there will be no direct questions about the topics covered in the first midterm, you are expected to know the concepts that are used in later topics, such as the meaning of measures of center and variation for data sets and random variables.

4. The exam is closed book and closed notes. You cannot bring any notes or cheat-sheet to the exam. However, you will be given a list of formulas (available on TritonEd). You are responsible for understanding what those formulas means before the exam.

5. A sample exam from past years has been uploaded on TritonEd. Don’t rely heavily on the sample exam though.

6. Please plan to arrive 5-10 minutes before 3:00pm, so that we can start the exam in time. You might need extra time to find your seat.
