The first midterm exam for Math 180B will be held on **Friday, April 26, 5:00-5:50pm in SOLIS 104.** Please read through the following very carefully.

1. You will be assigned a random seat number. Please check TritonEd under Grades>Midterm 1 Seat to find out your seat number. Seat numbers will be available by Thursday night.

2. **You need to bring a calculator** (being able to compute square roots). However, use of cellphones, tablets, laptops, and such is prohibited.

3. A table of values for the CDF of standard Normal Distributions ($\Phi(x)$ for $x \geq 0$) will be given. Even if your calculator computes probabilities related to Normal distributions, you should simplify the probabilities to the extent that the probability can be obtained from the table (i.e. in terms of non-negative values of the function $\Phi$).

4. The exam will include everything we covered from Chapters 1 and 2 of the textbook, plus sections 3.1-3.3 of Chapter 3.

5. The exam is closed book and closed notes. However, you are allowed to bring one sheet of paper. You are allowed to write on both sides of the sheet. However, your notes need to be your own hand-writing – you are not allowed to copy-paste from other resources.

6. A review session will be held on Thursday, Apr 25, 1:00 - 2:00pm at APM 6402.

7. Please plan to arrive 5-10 minutes before 5:00pm, so that we can start the exam in time. You might need extra time to find your seat.
