(Previous slide gives the number of combinations that were played \(n\) times, \(n\) up to 9, when 19.9 million tickets went on 41.4 million combinations. Manual play accounted for about 1/4 of the tickets.)
QUICK PICK GENERATION

NOW USUALLY DONE AT THE TERMINAL, AS OPPOSED TO AT A CENTRAL LOCATION

ALGORITHMS ARE SIMPLE SEEDING, SEEDING, SEEDING
(Ensuring ten random choices is not so hard, producing and keeping track of on the order of 50 million in a day is another story. Algorithms are usually standard ones, their seeding is what deserves careful consideration.)
Duplicate Quick Pick Play

Colorado Lottery

LOTTO

ANNUITY

A: 14 22 21 32 37 38 GP
B: 14 22 31 32 37 38 GP

PRICE $ 2.00 037245
NOV 9 94

CALL DENVER 755-LUCK
OR PUEBLO 542-LUCK

RETAILER NUMBER 094864
CLAIM NUMBER 313-10537104-120
(Of course people’s intuition is not necessarily good as to what is truly random, grumbling might follow. The previous slide shows a ticket sold with identical choices in a 6 of 42 game . . . some 5.25 million combinations in all. If 5.25 million of these tickets are sold, expect one as shown.)
Popular plays at Super Lotto are . . .

Choose 5 of 47
Choose 1 of 27

(THIS IS A TEST)
(Intelligent play would be manual and meant to avoid other manual plays. Some of those listed are clear-cut losers, others less so. The combination whose frequency of choice sports superscript j names the draw j times back; the first question-marked entry is likely to be found on the back of a play ticket under the inscription “this is how you play the game.”)
How many combinations do players “know”?

We know the number of boards covered and the number of Quick Picks played. Quick Pick coverage is independent of manual coverage, hence the number of boards not covered at all, divided by the number of boards not covered by Quick Picks, is about the proportion not covered by manual plays.
Intelligent play is not so hard to accomplish. For an interesting book on what combinations people “know”, see “How to Win More” by Henze and Riedwyl. Prime numbers are no big secret, for example.)
(The Board of Education - at least in California - cares about sales projections.

The state cares about who plays these games.

The Lottery cares about proper placement of terminals.

Game development is not very advanced . . . Lotto?! Keno?!)
