Today: Sequences and their limits

> Q&A: January 12

Next: Ross § 9

Week 2:

- homework 1 (due Friday, January 14)

## Symbols $+\infty$ and $-\infty$

Often it is convenient to work with  $\mathbb{R} \cup \{+\infty, -\infty\}$ .

Extend  $\leq$  to this set using rules:

- $\forall x \in \mathbb{R}$

- 

Use  $\pm\infty$  to denote unbounded intervals

$$[a, +\infty) := \quad , \quad (a, +\infty) :=$$

$$(-\infty, b] := \quad , \quad (-\infty, b) :=$$

$$(-\infty, +\infty) :=$$

We define

- $\sup S =$  if  $S$  is not bounded above
- $\inf S =$  if  $S$  is not bounded below

$$\sup \mathbb{N} = \quad , \quad \inf \mathbb{Z} =$$

# Sequences

Function, mapping: Let  $X$  and  $Y$  be two sets. We say that there is a function defined on  $X$  with values in  $Y$ , if via some rule  $f$  we associate to each element  $x \in X$  an (one) element  $y \in Y$ . We write

$X$  is called the domain of definition of the function,

$y = f(x)$  is called the image of  $x$ .

Def (Sequence) A function, whose domain of definition is the set of natural numbers, is called a sequence.

Notation:

# Examples of sequences

•

•

•

•

•

•

•

# Convergence

Def 7.1. A sequence  $(s_n)$  of real numbers is said to **converge** to the real number  $s$  if

Notation:  $s_n \rightarrow s$  or  $s_n \rightarrow s$

Def A sequence that does not converge is said to **diverge**.  
**convergent / divergent**

Remark  $N \in \mathbb{N}$  in the definition depends on  $\varepsilon$ .

$s_n =$

$$|s_n - s| < 1 \text{ for all } n$$

$$|s_n - s| < 0.1 \text{ for all } n$$

$$|s_n - s| < 0.01 \text{ for all } n$$

## Examples of sequences

- $(a_n)_{n=1}^{\infty}$ ,  $a_n = 0$        $(a_n)_{n=1}^{\infty} = (0, 0, 0, 0, \dots)$
- $(a_n)_{n=1}^{\infty}$ ,  $a_n = n$        $(a_n)_{n=1}^{\infty} = (1, 2, 3, 4, \dots)$
- $(a_n)_{n=1}^{\infty}$ ,  $a_n = \frac{1}{n}$        $(a_n)_{n=1}^{\infty} = (1, \frac{1}{2}, \frac{1}{3}, \frac{1}{4}, \dots)$
- $b_n = \frac{1}{2^n}$ ,  $n \in \{0, 1, 2, \dots\}$        $(b_n)_{n=0}^{\infty} = (1, \frac{1}{2}, \frac{1}{4}, \frac{1}{8}, \dots)$
- $\sin\left(\frac{n\pi}{2}\right)$ ,  $n \in \mathbb{N}$        $(1, 0, -1, 0, 1, \dots)$
- $b_n = \left(1 + \frac{1}{n}\right)^n$ ,  $n \in \mathbb{N}$        $(b_n)_{n=1}^{\infty} = (2, 2.25, 2.3704, 2.4414, 2.5216, \dots)$
- $a_n = n^2 \sin\left(\frac{1}{n^2}\right)$ ,  $n \in \mathbb{N}$        $(a_n)_{n=1}^{\infty} = (0.84, 0.98, 0.997, 0.9993, 0.9997, \dots)$

## Uniqueness of limit

Prop. Let  $(s_n)_{n=1}^{\infty}$  be a convergent sequence. Then

$$\lim_{n \rightarrow \infty} s_n = s \quad \wedge \quad \lim_{n \rightarrow \infty} s_n = t \quad \Rightarrow$$

Proof. Fix  $\varepsilon > 0$ . Then

$$\textcircled{1} \quad \lim_{n \rightarrow \infty} s_n = s \quad \Rightarrow$$

$$\textcircled{2} \quad \lim_{n \rightarrow \infty} s_n = t \quad \Rightarrow$$

$$\textcircled{3} \quad \textcircled{1} \text{ and } \textcircled{2} \Rightarrow \forall n > \max\{N_1, N_2\}$$

$\Rightarrow$

## Example

Let  $p \in \mathbb{Z}$ . Then  $\lim_{n \rightarrow \infty} n^p = \begin{cases} p < 0 & \text{(a)} \\ p = 0 & \text{(b)} \\ p > 0 & \text{(c)} \end{cases}$

Proof (b)  $n^0 = 1 \Rightarrow \forall \varepsilon > 0 \forall n \in \mathbb{N} \quad |n^0 - 1| = 0 < \varepsilon.$

(c) Suppose  $\exists s \in \mathbb{R}$  s.t.  $\lim_{n \rightarrow \infty} n^p = s$ . Then

$$\forall \varepsilon > 0 \exists N \in \mathbb{N} \forall n > N \quad |n^p - s| < \varepsilon$$

$\Rightarrow$

$\Rightarrow n^p$  is divergent

(a) Fix  $\varepsilon > 0$ , denote  $q = -p \in \mathbb{N}$ .  $\left\{ \text{find } N \text{ s.t. } \forall n > N \right.$

Take  $\quad$ . Then for  $n > N$

## Example

$$\lim_{n \rightarrow \infty} \frac{5n^4 - n - 10}{7n^4 - n^2} =$$

$$\frac{5n^4 - n - 10}{7n^4 - n^2} =$$

$$\left| \frac{5n^4 - n - 10}{7n^4 - n^2} - \frac{5}{7} \right| = \left| \frac{35n^4 - 7n - 70 - 35n^4 - 5n^2}{49n^4 - 7n^2} \right| = \left| \frac{-5n^2 - 7n - 70}{49n^4 - 7n^2} \right| < \varepsilon$$

$$\forall n > 10$$

$$\Rightarrow \left| \frac{-5n^2 - 7n - 70}{7n^2(7n^2 - 1)} \right| <$$

$$N =$$

Proof Fix  $\varepsilon > 0$ . Then  $\forall n > \max\{10, \lceil \frac{1}{\sqrt{\varepsilon}} \rceil\}$

$$\left| \frac{5n^4 - n - 10}{7n^4 - n^2} - \frac{5}{7} \right| = \left| \frac{-5n^2 - 7n - 10}{7n^2(7n^2 - 1)} \right| < \frac{7n^2}{7n^2(7n^2 - 1)} < \frac{1}{6n^2} < \frac{1}{n^2},$$

$$\text{and } n > \lceil \frac{1}{\sqrt{\varepsilon}} \rceil \Rightarrow$$
