## Math 270B: Numerical Analysis (Part B) <br> Winter quarter 2023 <br> Homework Assignment 5

## Due: 10:00 am, Wednesday, February 15, 2023.

1. Given $q_{1}, \ldots, q_{m} \in \mathcal{P}$. Prove that they are linearly independent in $\mathcal{P}$ if and only if the Gram matrix $G\left(q_{1}, \ldots, q_{m}\right)=\left[G_{i j}\right]_{i, j=1}^{m}$ is symmetric positive definite, where

$$
G_{i j}=\int_{a}^{b} p_{i}(x) p_{j}(x) d x, \quad i, j=1, \ldots, m
$$

2. Use the Gram-Schmidt orthogonalization to construct the orthogonal polynomials $Q_{0}, Q_{1}$, and $Q_{2}$ on $[0,1]$ from $q_{0}(x)=1, q_{1}(x)=x$, and $q_{2}(x)=x^{2}$.
3. Let $\left\{Q_{n}\right\}_{n=0}^{\infty}$ be orthonormal polynomials on $[a, b]$. Define $K_{n}(x, t)=\sum_{k=0}^{n} Q_{k}(x) Q_{k}(t)$ for all $n \geq 0$ and all $x, t \in \mathbb{R}$. Show that

$$
p_{n}(x)=\int_{a}^{b} p_{n}(t) K_{n}(x, t) d t \quad \forall p_{n} \in \mathcal{P}_{n} \text { and } x \in \mathbb{R}
$$

4. Let $u, v \in C^{2}([0,1])$ be such that $u(0)=u(1)=v(0)=v(1)=0$. Let $\lambda, \mu \in \mathbb{R}$ be such that $\lambda \neq \mu$. Assume that $-u^{\prime \prime}+u=\lambda u$ and $-v^{\prime \prime}+v=\mu v$ on $[0,1]$. Prove that $u$ and $v$ are orthogonal in $L^{2}(0,1)$.
5. Let $P_{n}(x)=\left(2^{n} n!\right)^{-1}\left[\left(x^{2}-1\right)^{n}\right]^{(n)}(n=0,1, \ldots)$ be the Legendre polynomials. Let $r \geq 1$ be an integer. Show that

$$
\int_{-1}^{1} P_{m}^{(r)}(x) P_{n}^{(r)}(x)\left(1-x^{2}\right)^{r} d x=0 \quad \text { if } m, n \geq r \text { and } m \neq n
$$
