

You're rolling a fair die until you get a 6. It's been 12 rolls already, but no 6's so far. The expected time you have to wait **from now** until the first 6 is

(a) less than

(b) the same as

(c) greater than

the expected time you would wait **from the start** (if you weren't conditioning on anything – in other words, if you were to start over completely).
